While inserting the elements 71, 65, 84, 69, 67, 83 in an empty binary 1. While inserting the elements / 1, 03, 04, 03, 07, 03 in an angel, and search tree (BST) in the sequence shown, the element in the lowest level is _____. Answer 67 Marks: 1/1 Status: Correct 2. While inserting the elements 5, 4, 2, 8, 7, 10, 12 in a binary search tree,

the element at the lowest level is _____.

Answer

Status: Wrong Marks: 0/1

3. Find the post-order traversal of the given binary search tree.

Answer

10, 17, 20, 18, 15, 32, 21

Status: Correct Marks: 1/1

4. Find the in-order traversal of the given binary search tree.

Answer

1, 2, 4, 13, 14, 18

Status: Correct Marks: 1/1

5. Which of the following is the correct in-order traversal of a binary search tree with nodes: 9, 3, 5, 11, 8, 4, 2?

Answer

2, 3, 4, 5, 8, 9, 11

Status: Correct Marks: 1/1

6. Find the preorder traversal of the given binary search tree.

Answer

2, 14, 10, 9, 1, 4, 7, 6

Status: Wrong Marks: 0/1

Which of the following is the correct pre-order traversal of a binary

search tree with nodes: 50, 30, 20, 55, 32, 52, 57?

Answer

50, 30, 20, 55, 32, 57, 52

Status: Wrong Marks: 0/1

8. The preorder traversal of a binary search tree is 15, 10, 12, 11, 20, 18, 16, 19. Which one of the following is the postorder traversal of the tree?

Answer

19, 16, 18, 20, 11, 12, 10, 15

Marks: 0/1 Status: Wrong

9. Which of the following is the correct post-order traversal of a binary search tree with nodes: 50, 30, 20, 55, 32, 52, 57?

Answer

20, 30, 32, 52, 57, 55, 50

Status: Wrong Marks: 0/1

10. In a binary search tree with nodes 18, 28, 12, 11, 16, 14, 17, what is the value of the left child of the node 16?

Answer

14

Marks: 1/1 Status: Correct

11. How many distinct binary search trees can be created out of 4 distinct keys?

Answer

Marks: 1/1 Status: Correct

12. Find the postorder traversal of the given binary search tree.

Answer

1, 4, 2, 18, 14, 13

Status: Correct Marks: 1/1

13. Find the pre-order traversal of the given binary search tree.

Answer

13, 2, 1, 4, 14, 18

Status: Correct Marks: 1/1

14. Which of the following operations can be used to traverse a Binary Search Tree (BST) in ascending order?

Answer

Inorder traversal

Status : Correct Marks:

15. Which of the following is a valid preorder traversal of the binary search tree with nodes: 18, 28, 12, 11, 16, 14, 17?

Answer

18, 12, 11, 16, 14, 17, 28

Status: Correct Marks: 1/1

Section 1: Coding

1. Problem Statement

John is learning about Binary Search Trees (BST) in his computer science class. He wants to create a program that allows users to delete a node with a given value from a BST and print the remaining nodes using an inorder traversal.

Implement a function to help him delete a node with a given value from a BST.

Input Format

The first line of input consists of an integer N, representing the number of nodes in the BST.

The second line consists of N space-separated integers, representing the values of the BST nodes.

The third line consists of an integer V, which is the value to delete from the BST.

Output Format

The output prints the space-separated values in the BST in an in-order traversal, after the deletion of the specified value.

If the specified value is not available in the tree, print the given input values inorder traversal.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: 5
   1051527
   15
   Output: 2 5 7 10
   Answer
   #include <stdio.h>
   #include <stdlib.h>
   struct TreeNode {
     int data:
  struct TreeNode* left;
     struct TreeNode* right;
   };
   struct TreeNode* createNode(int key) {
     struct TreeNode* newNode = (struct TreeNode*)malloc(sizeof(struct
   TreeNode));
     newNode->data = key;
     newNode->left = newNode->right = NULL;
     return newNode;
// Insert a node into the BST
```

```
struct TreeNode* insert(struct TreeNode* root, int key)
       if (root == NULL) return createNode(key);
       if (key < root->data)
         root->left = insert(root->left, key);
       else
         root->right = insert(root->right, key);
       return root:
    }
    // Find the minimum value node in a BST
    struct TreeNode* findMin(struct TreeNode* root)
    {
       while (root && root->left != NULL)
         root = root->left;
       return root;
    }
    // Delete a node with a given value
    struct TreeNode* deleteNode(struct TreeNode* root, int key)
241
       if (root == NULL) return NULL;
       if (key < root->data)
    {
root->left = deleteNode(root->left, key);
```

```
} else if (key > root->data)
    root->right = deleteNode(root->right, key);
} else
{
    // Node found
    if (root->left == NULL
       struct TreeNode* temp = root->right;
       free(root);
       return temp;
} else if (root->right == NULL)
       struct TreeNode* temp = root->left;
       free(root);
       return temp;
} else
{
       struct TreeNode* temp = findMin(root->right);
root->data = temp->data;
     // Node with two children
```

```
root->right = deleteNode(root->right, temp->data);
    }
       return root;
    }
     // In-order traversal
    void inorderTraversal(struct TreeNode* root)
       if (root == NULL) return;
       inorderTraversal(root->left);
       printf("%d ", root->data);
       inorderTraversal(root->right);
    }
    int main()
       int N, rootValue, V;
struct TreeNode* root = NULL;
for (int i = 0. i < N. . . . . . . .
         int key;
         scanf("%d", &key);
         if (i == 0) rootValue = key;
         root = insert(root, key);
       }
       scanf("%d", &V);
       root = deleteNode(root, V);
       inorderTraversal(root);
       return 0;
                                                                              Marks : 10/10
Status : Correct

Section 1: Coding

1. Problem Statement

You are required to implement basic operations on a Binary Search Tree (BST), like insertion and searching.

Insertion: Given a list of integers, construct a Binary Search Tree by repeatedly inserting each integer into the tree according to the rules of a BST.

Searching: Given an integer, search for its presence in the constructed Binary Search Tree. Print whether the integer is found or not.

Write a program to calculate this efficiently.

Input Format

The first line of input consists of an integer n, representing the number of nodes

in the binary search tree.

The second line consists of the values of the nodes, separated by space as integers.

The third line consists of an integer representing, the value that is to be searched.

Output Format

The output prints, "Value <value> is found in the tree." if the given value is present, otherwise it prints: "Value <value> is not found in the tree."

```
Sample Test Case
Input: 7
8 3 10 1 6 14 23
Output: Value 6 is found in the tree.
Answer
#include <stdio.h>
#include <stdlib.h>
// Define structure of a BST node
struct Node
  int data:
  struct Node* left;
  struct Node* right;
};
// Function to create a new node
struct Node* createNode(int value)
```

```
struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
      newNode->data = value;
      newNode->left = newNode->right = NULL;
      return newNode;
    }
    // Insert a value into BST
    struct Node* insert(struct Node* root, int value)
      if (root == NULL)
        return createNode(value);
      if (value < root->data)
        root->left = insert(root->left, value);
      else
        root->right = insert(root->right, value);
      return root;
    // Search for a value in BST
int search(struct Node* root, int key)
    {
      if (root == NULL)
        return 0;
      if (key == root->data)
        return 1;
      else if (key < root->data)
                                                      241901016
        return search(root->left, key);
        return search(root->right, key);
```

```
24,190,1076
int main()
{
  int n, key, val;
  scanf("%d", &n);
  struct Node* root = NULL;
                                                                                24,190,1016
  for (int i = 0; i < n; i++)
    scanf("%d", &val);
    root = insert(root, val);
}
  scanf("%d", &key);
  if (search(root, key))
    printf("Value %d is found in the tree.\n", key);
  else
    printf("Value %d is not found in the tree.\n", key);
  return 0;
}
                                                                        Marks: 10/10
